

PPSystem

PPSystem - not only for e-bikes

Parking e-bikes can be challenging due to the high weight of the bikes. Our well-thought-out horizontally movable storage system offers the ideal solution for this problem.

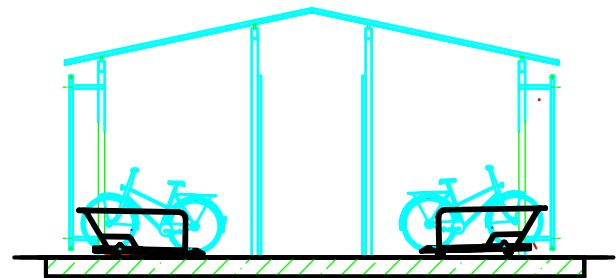

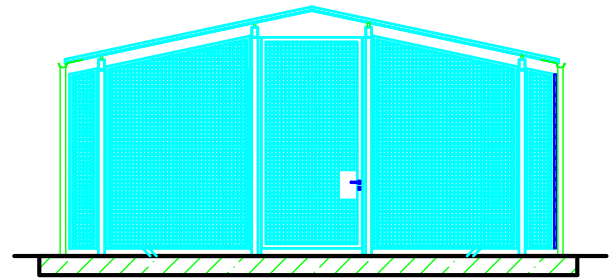

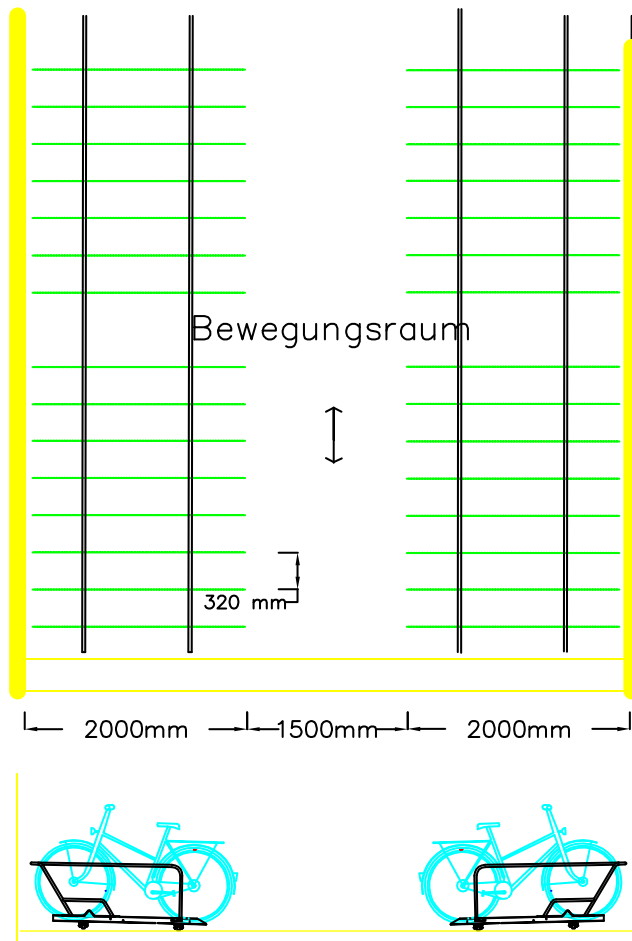

Thanks to the horizontally movable guide rails and the vertical high/low arrangement, the bikes and the batteries can be easily reached. The widened feeders also simplify operation.

The PPSystem is equipped with a rewind protection and horizontal leaning brackets. This ensures that the wheels are firmly and safely stowed away.

Like all Josta products, this parking system is characterized by its high-quality workmanship and durability.

Technical information PPSystem

Spezifikation

Items

Bike row system

Type PPSystem (horizontal moving system for bikes)

Brand: JOSTA®

Corrosion protection:

Galvanized steel or galvanized and additionally powder-coated with RAL

Construction length: .. mm

Number of slots: .. pc(s)

Dimension: 2000 depth

Center distance: 320 mm pushed together (390 mm,
with widened range of movement)

Arrangement: vertically up / down and horizontally offset

Operation: widened entry guides

Characteristics:

- Sprags
- horizontal leaning bracket
- high / low / skewed settings
