

## VPSystem

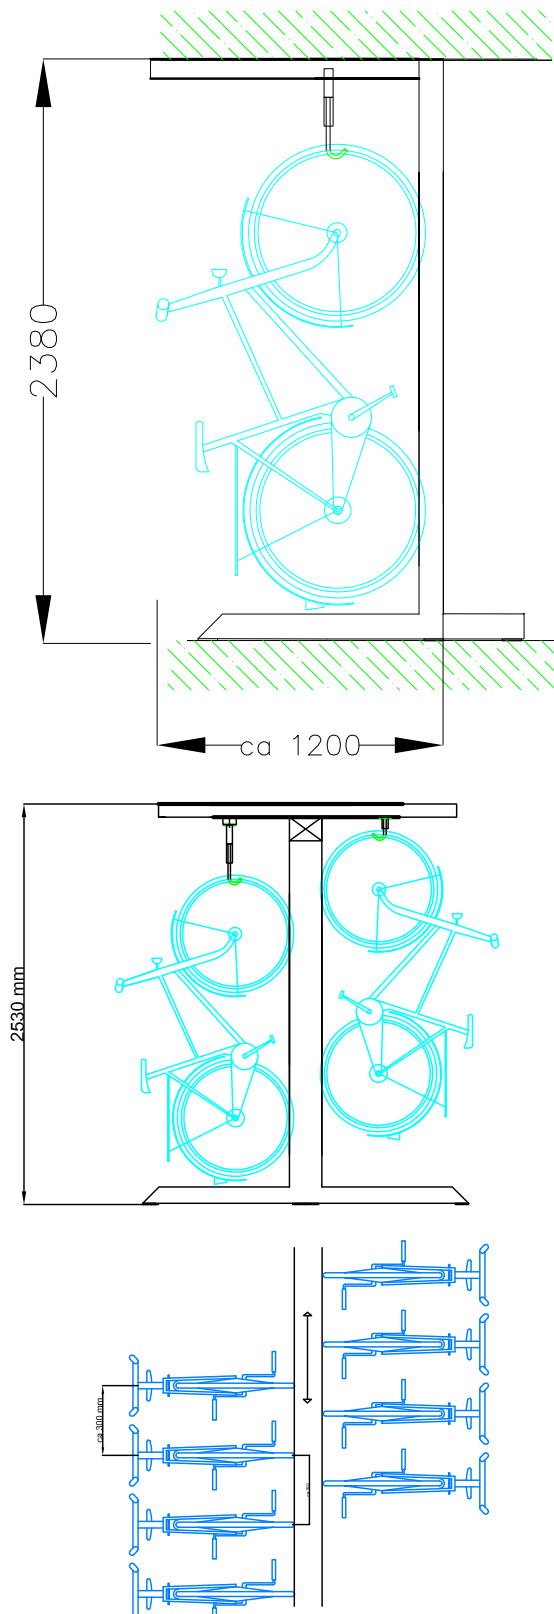

The VPSystem is a vertical automatic lift system and the most convenient and effective way of storing bicycles. So the bike can be parked vertically without physical exertion.

The VPSystem is used where space is limited.

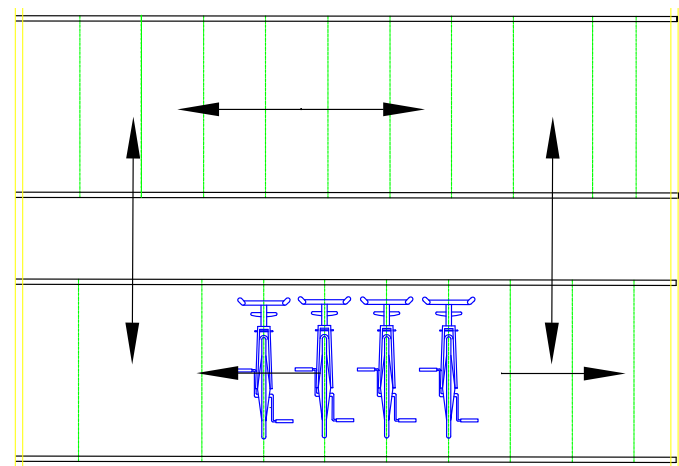

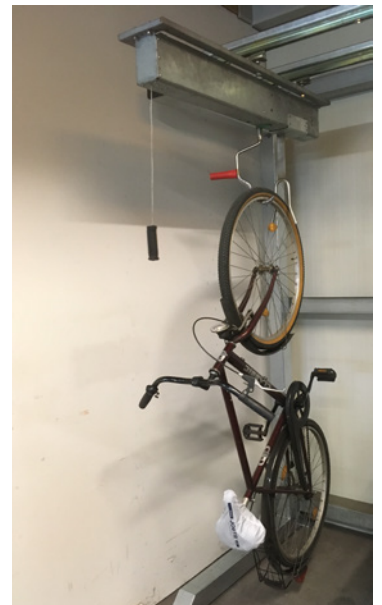

The system is easy to use and compact. It also enables easy and convenient parking from the horizontal to the vertical position.

## Technology

- Ceiling height for direct mounting: 2380 mm
- With a free-standing steel structure: min 2530 mm
- With or without a roof
- PVC coated hooks are parked in the upper one without a bicycle (semi-automatic) position
- Also for bicycles with taillights and rear wheel protection bars
- Made in Germany

The VPS system can be moved in the vertical position both to the right/left and also to the front/back horizontally, so that the bicycles pushed together require a distance of approx. 300 mm.

## Options

- Rigid as ceiling mounting
- Movable with ball-bearing rollers and rails
- With a free-standing stand construction
- One or two-sided installation
